

## REMARKS

Several typographical errors and mistakes were found in the specification which are being corrected.

In the specification on page 3 first paragraph of the Description of the Preferred Embodiment a space was added between the period at the end of the second sentence and the first letter of the next sentence.

In the specification on page 4 second paragraph an extra space was removed in line 3 between the words "organisms" and "as". On line 6 the reference number "40" was changed to "42".

In the specification on page 5 third paragraph line 2 the word "he" was changed to "the".

In the specification on page 5 forth paragraph the word "potassium" is being deleted as it is not a nutrient.

The claim 1 was amended to show the amount of dissolved oxygen added to the septic tank. The specification near the bottom of page 5 states the amount of dissolved oxygen needed to make he system function. It is believed that the amount of dissolved oxygen added to the septic tank to make the system work places the claim in a condition for allowance.

New claims were added to show how the drain field is aerated. Information about the aerators is found on page 4 third paragraph of the application. The prior art shows a means for pumping air into the drain field. The new claims are for aerators formed by drilling down to the aggregate rock in the drain field and the number of aerators needed for a typical household.
